

DYNAMIC DOCUMENT GENERATION

Solutions for Next Generation Document Automation

DocOrigin is an innovative and intuitive software solution for designing and generating dynamic business documents. Whether producing large volumes of invoices or statements, or a single customer letter, DocOrigin handles business-critical requirements quickly, easily, and affordably. What's more, DocOrigin allows companies to leverage the data generated by older legacy systems, modern enterprise and customer resource management systems, and other line-of-business applications to create and generate affordable high-value documents. DocOrigin saves money, builds value and increases return on investment with documents, technology and people.

DocOrigin Communicates More Effectively

DOCORIGIN *At a Glance*

Output performance that includes point of sale graphics used for marketing and upselling

Multi-Platform Deployment for AIX, AS/400, IBM i, Linux, and Windows

Built in Migration for JetForm Central and Adobe LiveCycle Output Replacement

Integrated Multi Channel Communications

Intuitive Template Creation

Use DocOrigin to engage customers, employees and partners with clear, concise and professional documents that can be customized for every circumstance. DocOrigin easily meets the rising demand for paperless statements and correspondence via email or the web using built in multi-channel communications capabilities. Now it's easy to provide documents to each recipient on the desired devices or in the preferred format no matter what medium is used.

Linux

Leverage Existing Investments

DocOrigin was built from the ground up to easily integrate with legacy and line-of-business systems and utilizes existing data sources. The solution provides multi-platform deployment of key integration modules. The dynamic software extracts key data elements from existing system outputs while providing a clear and effective path for future integration as those systems evolve.

High Performance Output

Printing or electronic presentation, DocOrigin is fast, flexible, and functional.

Custom drivers produce PCL, Postscript, PDF and HTML at optimal speed and efficiency, with generated output rates exceeding 30,000 pages per minute. These drivers provide a range of customization and performance-related settings that generate the output to the desired location providing maximum results. DocOrigin drives the highest speed continuous feed ink jet printers and cut sheet lasers with a single solution.

Improve Response

DocOrigin streamlines cumbersome document generation processes that cost money, effort and time. DocOrigin ensures key documents and processes are updated quickly while existing systems continue to run. Integrate DocOrigin into a business environment incrementally to eliminate disruptive and costly transitions.

Meet Compliancy Requirements

Increasingly strict regulatory and legal requirements are setting the tone for business today, and meeting those requirements can be difficult with disparate pockets of technology and siloed processes. DocOrigin generates documents that comply with government and industry standards and accessibility requirements with a level of flexibility that ensures the ability to manage future changes and requirements.

It's Easy Being Green

Many companies are embracing sustainability initiatives with a social responsibility to be “green.” DocOrigin makes it easy to reduce or eliminate paper since it was fundamentally designed to enable smooth migration to electronic documents. We recognize the need for either/or requirements and DocOrigin provides control by automatically generating output in whatever format needed on a document-by-document basis. Send batch files to DocOrigin for automated sorting, bursting and

dynamic delivery to print, email, fax, text, portal, and archive in a single pass.

Migrate to DocOrigin

DocOrigin was developed by the people who originally created the JetForm/Adobe Central Pro Output Server products. As a result, migrating from Adobe Central or Adobe LiveCycle Output to DocOrigin is seamless. Eclipse created automated batch form conversion tools and streamlined procedures to migrate forms quickly and accurately – minimizing downtime and conversion risks – while our expert consultants ensure that everything transitions smoothly. Users that migrate to DocOrigin find that the solution is just as robust and dependable as JetForm/Adobe Central, yet more efficient, faster, and easier to work with. In short: DocOrigin is a next-generation product that is in-tune with today’s document requirements.

Moving Forward

There is much more to say about the benefits and capabilities of DocOrigin. Contact Eclipse today to learn more about how Dynamic Document Generation with DocOrigin can save money, build value and increase return on investment in documents, technology and people.
