

Simplifying Document Output Migration

The time is now to replace your output solution

DocOrigin is the ideal product replacement
for Adobe Central

Eclipse is a leading provider of enterprise-class software, training and services for document generation, presentment, and archiving solution. For more than two decades, we have worked with a vast array of market leaders from a variety of industries.

We are the exclusive North America distributors of DocOrigin, the best next-generation replacement for the sunset Adobe Central, formerly known as JetForm Central or Accelio Presents Central. DocOrigin was developed by the people who originally created the Adobe Central (JetForm) products. It is as robust and dependable as JetForm Central, yet more efficient, faster, easier to work

Trustworthy, reliable solution with unparalleled throughput speeds

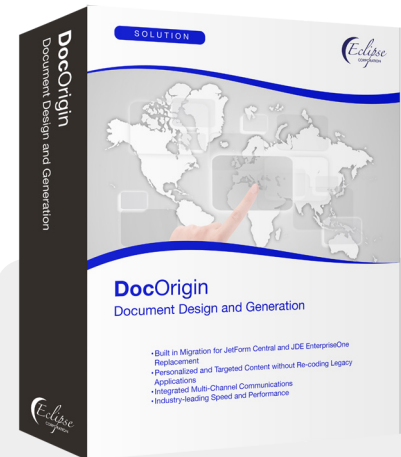

As older, end-of-life systems like JetForm, Adobe Central and Adobe LiveCycle are retired, it is important to select a suitable replacement solution that will ensure the ability to create, deliver and manage high-value customer correspondence that will meet the needs of modern business.

Many organizations struggle to meet the demands of today's info-intense business environment due to the antiquated state of their document generation systems. We provide a path forward with automated batch form conversion tools and streamlined procedures to migrate forms quickly and accurately — minimizing downtime and conversion risks. Whether you need to produce large volumes of critical communications or just a single customer letter, you need a system that creates and manages your businesscritical documents quickly, easily and affordably.

DocOrigin is the answer, and is quickly becoming the solution of choice to replace Adobe Central and Adobe LiveCycle.

“Eclipse made a complex and mission-critical undertaking so much easier. Not only did DocOrigin perform beyond our expectations, so did the team at Eclipse.”

ANNETTE SWARTZ, ABC INOAC

FEATURES

- WYSIWYG Design Interface

- Merge Test and PDF and HTML Preview
- Auto-Generate Test Data
- Overflow Header & Footer
- Automatic Pagination
- Simple Page X Of Y
- Column Support
- Hierarchical View Of Objects
- Embedded Field Support

Flexible Solutions for your Business Needs

Built by the founders of the industry

DocOrigin is the next generation of document rendering technology, developed by the people who originally created the Adobe Central (JetForm) products. DocOrigin is as robust and dependable as Adobe Central, yet more efficient, faster, easier to work with, and is in-tune with today's document requirements. The developer's extensive history with forms and document production enables them to get you converted to DocOrigin quickly and effectively. From production speeds to the complex assembly of a dynamic form, DocOrigin has left no stone unturned, addressing every facet of your existing document output needs.

Best-in-Class Solution

DocOrigin is the engine that drives output from any business management software anywhere it needs to go! It is fueled by your data to define the content, structure and assembly of your document. For robust client statements, it can quickly be tuned to include top-of-the-line features such as QR barcodes, 3D graphics, content drive custom ads and eye-catching colors to draw the audience to the right information quickly and easily. Its powerful engine heads down the open road at top-speeds unmatched by its competitors, its destination can be defined for HTML, PDF, high-speed printer, email or a combination of all of them. DocOrigin has taken document output to new levels to include must-have features including:

- Filter Editor tool allows users to define complex XML data structures from a print overlay file.
- DocOrigin Design uses open standards, XML structured templates, and no proprietary file formats.
- Matching parent nodes and field names is all that is required to map fields to the form.
- Panes, dynamic slices of a form, automatically float within a pre-defined content boundary making it easy to design dynamic, flowing forms.
- Panes can be defined as headers, footers, repeatable detail lines or even optional sections that only show if the data needs it.
- JavaScript can be applied to any object or step in the process, thus, creating unlimited form design and processing capabilities.

Seamless Migration

Built-in conversion tools allow seamless integration for migrating from Adobe Central to DocOrigin.

- Form conversion tool allows the direct import or batch processing of existing Adobe Output or LiveCycle source files
- Existing subforms are automatically converted to panes
- Field format, type, picture masks and global settings are captured
- Embedded fields within text objects are automatically converted
- *No Print* fields are hidden
- Built-in data conversion tool to automatically convert field nominated data (IFD), CSV, and FRL to highly structured XML
- Panes are cross-referenced with the data to create proper XML parent nodes.

DocOrigin – The Future of Document Design and Generation Software

Eclipse Corporation provides enterprise class e-forms and document generation software solutions.
