New in 2018 Environmental Impact Assessment and Mitigation

This course studies scientific air pollution dispersion models to evaluate the concentration of a pollutant at a receptor or the impact on overall air quality from vehicle exhausts and industrial flue gas stack emissions. They apply scientific and engineering principles to evaluate if there are likely to be any adverse impacts to water quality, air quality, habitat quality, flora and fauna, agricultural capacity, social impacts, ecological impacts, noise impacts, etc.

SPAN	101	Beg Span I	5.00	5.00	A	5.00	20.00		C2	6A
GEOG	101	Principles of Landscape Ecology	4.00	4.00	A	4.00	16.00		A2	1A

New! Forest and Wildlife Ecology 565 The intent of the course is to explore the principles of landscape ecology as a framework for landscape research, analysis and management. The course will first develop definitions and concepts of landscape ecology as a framework for understanding and managing landscapes. Landscape ecology provides new approaches to fundamental research questions in ecology, as well as new approaches to forest and resource management that consider ecosystem processes at larger spatial and temporal scales. The course is expected to be useful to graduate students and senior undergraduates in natural resources, ecology, conservation biology, landscape architecture, geography, land use planning, and other fields.

Volunteer for the 2020 CYBATHLON

May 2-3, 2020 the gates will be opened for the continuation of the Cybathlon at the SWISS Arena in Kloten near Zurich. Physically impaired people using the latest assistive technologies will compete against each other at the 2020 Cybathlon. The arena will be charged with passion as the audience watch the exciting races and challenging tasks in the six disciplines that await the pilots and spectators.
